21627 Prefuse box F32 has open fuse. 4.00 vehicle delivered to workshop partially disassembled (trunk panels removed for accessing batteries. Vehicle would not start or shift from park. Could not communicate with vehicle systems with diagnostic unit. there was power available to some of the interior systems. Checked batteries and found starter battery is completely discharged, and systems battery is weak. used battery maintainer to provide power during diagnosis. consulted wiring diagrams. checked output of all circuits at F33 (rear prefuse box) and found battery voltage available at outputs 1,2,3,4,5,6. All internal fuses ok. removed front floor panel at passenger sid to gain access to power distribution at front. Checked all fuses at K40/4 and found all were ok. Traced power supply to N783 (eis) to F32 (front prefuse box). Battery voltage present at terminal E 1 and 3, but terminal 2 has no power. internal fuse is open circuit. Replaced fuse box . Systems now operating as designed. Cleared fault codes.

21627 Replacement of systems and starter battery 2.50 Found starter battery completely discharged and systems battery very weak. recommended replacement of both due to complexity of repair. Cover panel was already removed and one of the threaded inserts was broken off from monocoque and was stuck into cover panel. Separated damaged insert and nut to aid in reinstallation of panel. Replaced both system and starter battery. reassembled all cargo area trim panels. vehicle now operates as designed. synched windows and set clock.
